PLANWISE ENTERPRISE · INVESTOR BRIEFING

The Computational Intelligence Platform for Land-to-Home Development

Deterministic, model-linked automation connecting plot feasibility, building design, BOQ cost, and engineer review.

1. Land Intake Boundary & Topo → **2. Feasibility** DCPR 2034 & FAR → **3. Parametric Design** CBM Solvers → **4. Cost & BOQ** CPWD / IS 1200 → **5. Build Review** Constructibility → **6. Engineer Handoff** IFC4 & G0–G8

PROBLEM & SOLUTION

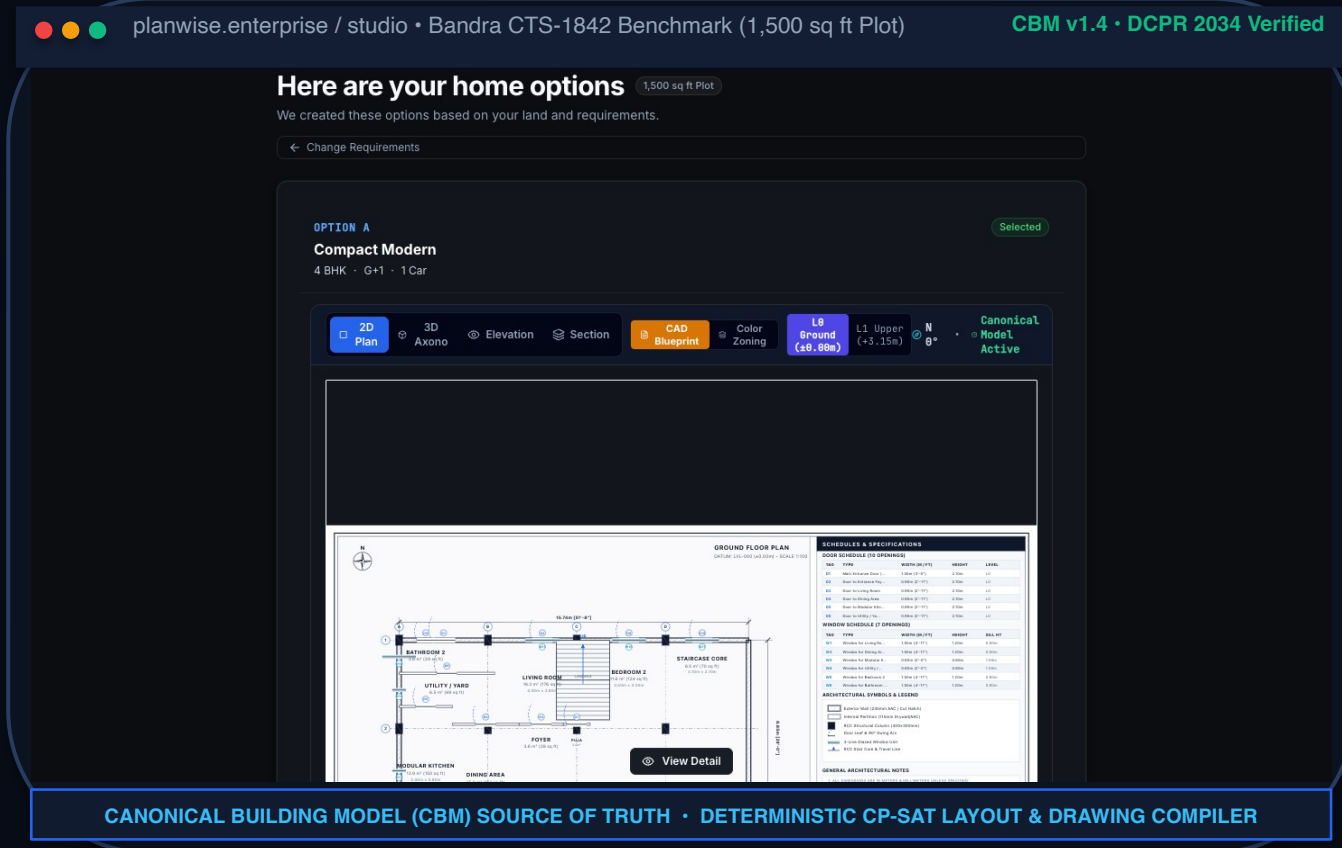

- Problem: Land feasibility, design, and costing are fragmented across disconnected tools.
- Solution: One connected computational workflow linking plot geometry, zoning, 3D models, and BOQ.

TECHNICAL DIFFERENTIATION (DETERMINISTIC CORE)

- Deterministic Math: CP-SAT discrete solver and watertight Manifold3D solids—zero AI hallucinations.
- Traceable BOQ: Model-linked IS 1200 quantities with automated CPWD rate analysis.
- Review Gates: Immutable G0–G8 engineering sign-off locks with cryptographic audit trail.

TARGET CUSTOMERS & PROPOSED MODEL

- Target Customers: Architects, residential developers, and structural engineering consultancies.
- Proposed Model: Proposed B2B SaaS subscription for professional project teams.
- Vision: Make land-to-home development measurable, traceable, and coordinated.

CANONICAL BUILDING MODEL (CBM) SOURCE OF TRUTH · DETERMINISTIC CP-SAT LAYOUT & DRAWING COMPILER

VERIFIED ENGINEERING BASELINE (OCTOBER 2026): 44/44 Regression Tests Passing · 8 PostGIS Migrations (34 RLS Tables) · ES256 JWKS Cryptographic Security · IFC4 OpenBIM & 9-Sheet Drawing Compiler

Stage: Controlled-pilot engineered baseline. AI is strictly advisory. Computational validation assists licensed professionals; does not replace statutory municipal permits or professional engineering seal.
